It’s Your Water

Long Island is world renowned for its beaches and waterways. What you do on land has a direct impact on our local waters. Your actions can affect the health of our coastal waters and impact scenic vistas.

Grass clippings and yard waste that are dumped in storm drains can clog drains, flood residential streets, cause water quality problems, and create navigational hazards.

Don’t let this happen to your street!

It’s Your Community

Drains that are clogged with grass clippings and yard waste cause street flooding, creating hazardous road conditions during heavy rain.

Take pride in your community. Keep drains clear of leaves, grass clippings and garbage.

Healthy waterways are your community’s asset. Protect your local waterways.

It’s Your Responsibility

It is a violation of Town of Brookhaven Town Code (§86A) and New York State regulations to dispose of debris in storm drains. Anyone using a storm drain to discard waste is liable for fines and penalties of $500 or more!

Yard waste should be bagged and properly disposed of at local compost facilities.

NEVER blow or sweep debris into storm drains!
