Farmingville, NY - On June 28th, Supervisor Mark Lesko, Deputy Supervisor/Councilwoman Kathleen Walsh, and Councilman Dan Panico were in attendance for the groundbreaking of a house that will be made completely out of American made-materials in East Moriches. Landmark Properties' "The Americana," a 2000 square foot ranch, will be the first home in New York to be built entirely from American-made materials.

"With the uncertain condition of our national economy, it's great to see an organization like Landmark Properties doing all it can to give a boost to American manufacturing," said Supervisor Lesko, "Landmark Properties and its founder Mark Baisch have done a great job of taking on projects that promote the values that this great nation was founded on. I'm sure that the family who will soon call this property home will take great pride in the fact that it will truly be made in America."

Deputy Supervisor/Councilwoman Kathleen Walsh said, "With the construction of a truly American-made house and the Homes for Returning Veterans program, which builds homes for our heroes returning from the Middle East, Landmark Properties has gained a well-deserved reputation as a local business that has a core philosophy of giving back to the community. I truly appreciate the great work that Mark Baisch and Landmark have done to help our residents achieve the American dream."

"I applaud the effort of Mr. Baisch and strongly believe that when possible, Americans should make the conscience decision to buy American made products," commented Brookhaven Town Councilman Dan Panico, "A solid commitment to America innovation and ingenuity can once again propel our manufacturing industry and create jobs for our citizens."
