

# Traffic Calming

The combination of physical features added to a roadway in an effort to encourage safer motor vehicle use and improve conditions for pedestrians and bicyclists.

- Driver Feedback Devices (DFD) attempt to reduce speeding by making motorists aware of the speeds they are traveling
  - Embedded Led fixtures are automatically turned on via pedestrian detector bollards
    - Colored crosswalks - Highly visible and are aesthetically appealing
  - Narrower roadways, additional sidewalks and upgraded countdown pedestrian signals...
    - Before and After Studies
